

SWEETY KUMARI

[\(+91\) 62011 98933](tel:+916201198933) — [✉ jhasweety2609@gmail.com](mailto:jhasweety2609@gmail.com) — [in LinkedIn](#) — [</> LeetCode](#)

OBJECTIVE

Software developer with a backend and applied-ML focus, experienced in building API-driven applications and automating manual workflows with machine learning. Comfortable across Java and Python, API integration, and SQL/NoSQL data layers, with a track record of turning slow, manual processes into reliable automated pipelines.

EDUCATION

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY

Master in Computer Application GPA: 8.55 /10

Chennai, Tamil Nadu

June 2024 – April 2026

R.M. COLLEGE, B.N. MANDAL UNIVERSITY

Bachelor in Computer Applications CGPA: 8.16 /10

Saharsa, Bihar

June 2019 – May 2022

EXPERIENCE

Technical Intern, Anna University

Jun 2025 – Aug 2025

- Automated AMS (analog/mixed-signal) circuit verification for an SRC-funded research project, eliminating manual spec-checking for the majority of test cases.
- Verified circuit design specs against analog output using Incremental Learning models, cutting manual verification time.
- Built and adapted ML validation models with a cross-functional team to handle distinct operating conditions (voltage/temperature/frequency).

PROJECTS

INCREMENTAL LEARNING for AMS Verification *[Python, Machine Learning, Data Analysis]*

[GitHub](#)

- Designed an automated ML pipeline that updates models without full retraining, reducing retraining time from 13 hrs to 1 hr.
- Processed and analyzed datasets spanning multiple operating conditions (voltage, temperature, frequency) to validate circuit specification compliance.
- Automated previously manual verification tasks and documented system design, model performance, and test results to support technical review and knowledge transfer.

SMART-FARE App *[Java, Android Studio, Firebase, REST API Integration]*

[GitHub](#)

- Developed an Android app integrating Uber and Ola REST APIs for real-time fare comparison, reducing fare-checking time from 2 apps to 1.
- Built the backend layer parsing Uber/Ola API responses, with retry handling and input validation to keep fare data accurate when an API failed or timed out.
- Implemented Firebase authentication and cloud data sync, isolating each user's saved searches and trip history.
- Built the Android UI to render live fare comparisons from both APIs in a single side-by-side view.

TECHNICAL SKILLS

Languages: Java, Python, SQL, HTML/CSS

Data & Storage: MySQL, MongoDB, Firebase

Tools & Platforms: Git, Android Studio, VS Code, Docker, REST API

Foundations: Data Structures & Algorithms, OOP, System documentation

ACHIEVEMENTS

- Solved **250+ algorithmic problems** in Java, Python, and SQL across LeetCode and GeeksforGeeks.
- Actively contributed to technical project reviews and research discussions in a team environment.

CERTIFICATIONS

- Amazon HackOn – Software Development Hackathon.
- Java Data Structures and Algorithms – Problem-Solving Certification.
- Fundamentals of Cyber Security – Secure Application Development. [\[>\]](#)
- Deloitte Technology Job Simulation on Forage, April 2026. [\[>\]](#)
